

STEM: SMALL-GROUP LESSONS in the Target Language (add-on)

Bonjour Language Camps offers small-group STEM lessons in each target language.

Our staff includes certified teachers and college education majors who provide 40-minute sessions centered around a science experiment or series of experiments. We focus on process language and the scientific method, as well as spoken fluency and vocabulary building.

These sessions are open to all campers ages 3.5–11, at all levels of proficiency.

The small-group sessions (up to 4 campers) integrate seamlessly with our camp schedule. Each camper attends 5–6 activities daily; those enrolled in small-group STEM spend one of these periods or the quiet time period in the STEM session.

STEM in the target language is not included in camp fees and is available as an optional add-on (\$45) during registration.
